

✓ **What is Internet TV+?**

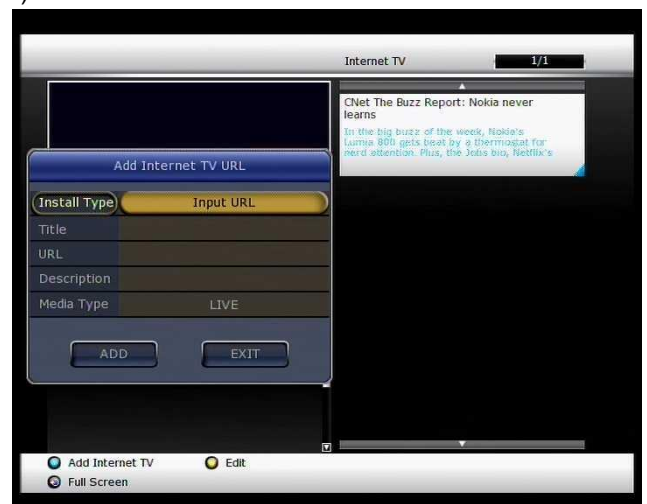

Internet TV+ enables you to watch internet media contents via URL. This function is not only supporting Live streaming broadcasting service but also FMS and wowza server (RTMP).

** Above Image is our concept screen for Internet TV+ to be adapted later

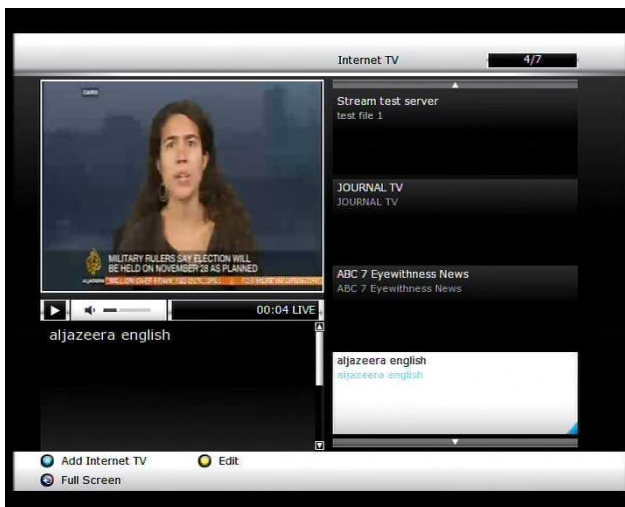

✓ **Enjoy with URL**

You can add URL address (Live or File) and description on your STB directly.
(Please refer to available protocol and codec type below)

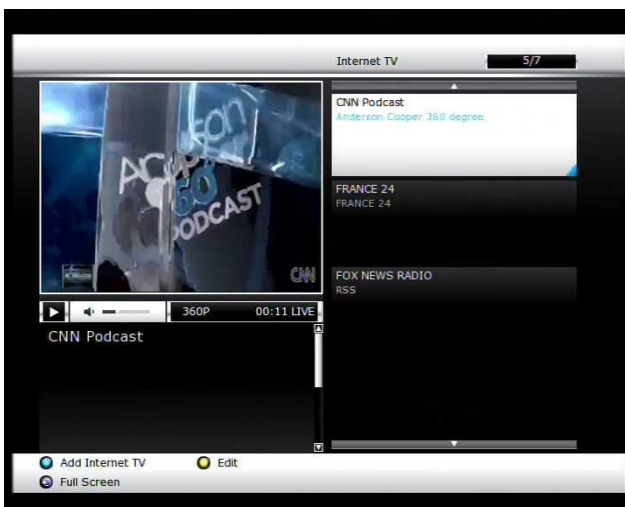

✓ **Live Streaming Broadcasting Available**

By adding Live streaming URL, you can watch real time live channel.

✓ **Podcast Available**

Podcast is one of powerful contents in the world and now, you can add world's podcast video and audio in the STB freely.

✓ **Available Protocol Type**

RTMP
RTMPT
HTTP

✓ **Available Codec Type**

- Video : MP1V, MP2V, MPEG4P2(MP4), H.264, VC1
- Audio : MP1A, MP2A, MP3A, AC3, AAC, PCM

✓ **Notice**

STB (Set-top-box) should be connected with Ethernet cable, with proper network settings.
(Please refer to the menu of "Network setting", and its operating instructions).
