

INTRODUCTION

High-resolution 1080p24 events are available through DISH Network Video On Demand (VOD). These HD events provide the highest quality viewing experience when using a compatible 1080p HDTV and DISH Network ViP-series DVR receiver.

1080p-COMPATIBLE DISH NETWORK RECEIVERS

- ViP612 DVR
- ViP622 DVR
- ViP722 DVR
- Future DVR models

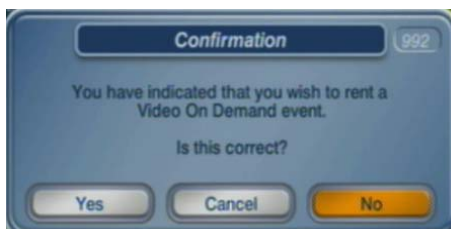

Initial VOD Popup #993

DETAILS

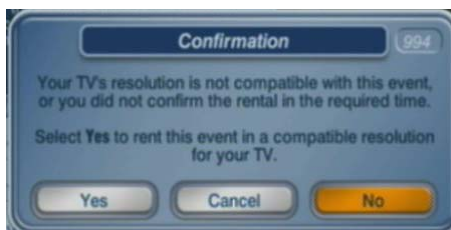

1080p events are listed in the Program Guide with "1080p" in the event name. When a 1080p program is selected, popup 993 displays to explain that the connection to the TV will be tested to ensure both the TV and the connection support that video resolution.

- If the test detects a compatible HDTV, popup 992 displays to ask the customer to confirm the rental of the event.

Successful Test Popup #992

- If the test does not recognize a compatible TV (or the customer did not respond quickly enough to confirmation popup 992), popup 994 displays to ask if the customer would like to watch the event in a different resolution compatible with the customer's TV.

Watch in Other Resolution Popup #994

CONSIDERATIONS

- When the dual-tuner, two-TV receivers are in Single Mode:
 - Picture-in-Picture (PIP) features are not available while viewing 1080p programs.
 - Other televisions connected to the receiver may display a blank screen while a 1080p program is viewed.
- 1080p events are only available through the Program Guide, found at Channel 501.
- An HDMI connection between the receiver and HDTV is recommended.
- DISH Network 1080p programming is delivered using the 24 frame-per-second HDTV video format. Not all HDTVs are compatible with this video resolution format (even some TVs that support 1080p).
- If your HDTV is 1080p compatible, the receiver automatically outputs 1080p—customers do not need to change their resolution settings in the HDTV Setup menu.
