# SKYBOX F3/M3 USB Wifi Connection

1. First please make sure that usb wifi device is connected.

2. Go to "Network Local Setting" menu,select network device.

3. Go to "Network Local Setting" main menu, then select "WiFi Manager" button.
 (* If the usb wifi device is not connected, "WiFi Manager" button will be disabled)

4.In the submenu of "WiFi Manager", please press "<" or ">" on the remote controller to enable the wifi device.

5. After the wifi device is enabled, it will scan AP list from wireless signal and show all AP automatically.
(* press red key on the remote controller to refresh the AP list)

6. Select your AP and input the right key, then press "Connect" button.

7. If the AP is connected successfully, it will show ip-address message box.

8.If AP is connected, select it and press "ok" button to show more information (ip address, encrypt mode, Signal level). If you want to disconnect this AP, please press "Disconnect" button.
