

## Philips Pronto™ Remote Control TSU3500 Fact Sheet

---

Crowned a 2006 CES Innovations winner, Philips' Pronto TSU3500's updated design features new controls that are simple and comfortable to operate along with superior function that can command countless devices. Providing increased clarity with a cutting-edge LED backlit screen, the TSU3500 showcases a dramatically enhanced display that is easy for consumers to view and control. The display screen, along with the icons, can be personalized by an installer to meet each consumer's unique needs and preferences.

Packaged with advanced ProntoEdit™ software, installers can easily program the TSU3500 to users' specifications. ProntoEdit is the PC software program that is included with every Pronto unit and provides extensive design flexibility, including the creation of personalized backgrounds, buttons, label icons and actions. The enhanced version of ProntoEdit features a fully-reprogrammed IR dialogue box to set the minimum IR code duration and an extended gallery for more imagery selections. Buttons now can be linked to each other graphically and right-click menus have been added, resulting in faster installations.

An RF extender – the RFX6500 - features an LED that indicates signal interference, enabling installers to place the RF receiver at the best position. The RFX6500 also includes a free-positional antenna that can be rotated in all directions, adding flexibility and ensuring the system is optimized.

### ***Fully customizable user interface***

- High-contrast, easy-to-read monochrome display
- Multiple commands blended into one-touch control
- Includes PC software to create a unique user interface
- Revolutionary new base template allows entire systems to be programmed with minimal effort required beforehand
