

DISH Pro Plus Technology

Highlights

- DISH Pro Plus receivers can be connected with a single-cable to DISH Pro Plus switches or LNBFs, when used with a DISH Pro Plus Separator.
- Any DISH Network receiver can be connected to a DISH Pro Plus switch or LNBF; DISH Pro Adapters are not needed.
- By definition, "DISH Pro Plus" receivers incorporate two satellite tuners.

Products with this logo support DISH Pro Plus Technology.

Features

- DISH Pro Plus Technology offers the following key advantages:
 - Connect DISH Pro Plus-compatible dual-tuner receivers to DISH Pro Plus switches and LNBFs using a DISH Pro Plus Separator and one cable.
 - Connect:
 - DISH Pro receivers
 - Legacy receivers, without a DISH Pro Adapter*
- DISH Pro Plus Technology shares many similarities with DISH Pro Technology, including:
 - Longer cable runs - up to 200 feet.
 - Enhanced diagnostics.
 - Requires RG-6 cable and other components rated to 2150 MHz.
- Compatible with DISH Pro switches and LNBFs.

Benefits

- Requires less wiring and simplifies the installation of dual-tuner receivers.
- Leverages use of existing in-home RG-6 cabling for dual-tuner receiver installations, reducing installation time.
- Backward compatible with DISH Network legacy receivers (non-DISH Pro or non-DISH Pro Plus receivers) - no DISH Pro Adapter is needed, therefore reducing installation costs.

DISH Pro Plus products include:

- DISH Pro Plus 44 Switch
- DISH Pro Plus Twin (future)
- DISH Pro Plus Separator
- DISH Pro Plus Receivers

DISH Pro Plus-compatible dual-tuner receivers include:

- DISH 322
- DISH Player-DVR 522
- DISH 721
- DISH Player-DVR 921
- Equivalent JVC and RCA models

DISH Pro Plus Logo

Appears on all DISH Pro Plus products. While not on DISH 721, the receiver does have DP Plus capabilities.

Referring to "DISH Pro Plus"

DISH Pro Plus will be written in the following ways:

- "DISH Pro Plus"
- "DP Plus"
