## Introducing the ViP211K

Audience: Techs/QAS/RSP

Release Date: 04/14/08

We are excited to introduce the ViP211K receiver as a replacement for the ViP211, on April 14, 2008. The ViP211K retains all the high quality features and functions as the ViP211.

There are three visible differences:

- The ViP211K is black in color
- The location of the Dolby Digital optical output
- The front panel buttons are different

Although the internal software has changed, it will not be apparent to the user.

The ViP211K is a single tuner that is both HD and SD compatible and functions as a digital over-the-air tuner. It includes:

- MPEG-4/MPEG-2 technology
- USB 2.0 port
- DishCOMM™ compatible
- 5.3 IR remote control

The front panel contains five buttons:

- Cursor Up
- Cursor Down
- SELECT navigation buttons
- POWER and System Info (a green light indicates power-on)

Also, an HDTV logo in the upper right corner illuminates when the receiver is on.
