

The Hopper Joey System is a cutting edge Whole-Home HD DVR that will revolutionize how our customers watch TV.

Each Hopper has three tuners and can support up to three Joeyes. With the PrimeTime Anytime feature, customers can record up to six programs simultaneously.

PrimeTime Anytime records all four major networks – ABC, NBC, CBS, and Fox on a single tuner, and it doesn't take any extra space on the Hopper's 2 terabyte hard drive.

With the TV Viewing Status screen, it is possible to pause a show on one TV, and continue watching right from where you left off at another TV in the house.

The Hopper and its Joeyes all share the same library of content, including: HD and SD DVR recordings, Pay-Per-View, and on-demand programming.

The technology that drives the Hopper Joey System is called MoCA, which stands for Multimedia over Coax Alliance. This allows for audio, video, and data to pass simultaneously through a single coaxial cable.
