

January 31, 2020

Attention: Chief Engineer, General Manger & Program Manager

Reason: Youtoo America Distribution Delivery Change

To Whom It May Concern:

As you no doubt have read in the media trades, the Federal Communications Commission is putting pressure on satellite companies to divert some of their airwaves to mobile users. Some in congress want the FCC, not the satellite operators, to run C-band. All that to say there is a growing push to move distribution away from satellite to an internet protocol delivery.

Because of that push, Youtoo America was recently notified by our satellite provider of a need to move our distribution to another satellite. Our current agreement with our satellite provider is set to expire soon. Given the current climate and advancement in technology, now is the best time to make the move to an IP delivery.

We were planning on making this move when our current satellite agreement expires this summer but with the recent notification, we did not want to ask our affiliates to change how they receive Youtoo America twice within a six-month window. So, Youtoo America will not be changing satellites. Instead, we will start moving our affiliates to IP delivery in March. **We will be fully moved over to IP by May 1, 2020. This means the satellite feed will be turned off at midnight, April 30, 2020.**

We are committed to working with our affiliates to make this move as smooth as possible. This includes providing the necessary receivers already programmed and ready for your use **BUT WE NEED YOUR HELP.**

Could you please inform us if you can take an IP feed directly into your edge equipment or will you require a receiver with an SDI output? Please email Tim Larson at [tim@youtooamerica.com](mailto:tim@youtooamerica.com) **today** so we can start this transition for you.

I know any transition is an inconvenience, so thank you in advance for working with us to make this as smooth of a process as possible.

Kind regards,

A handwritten signature in black ink that reads "Scott Miller".
